ECONOMICS OF AGRICULTURE

**REPORTS AND PUBLICATIONS ISSUED
OR SPONSORED BY USDA'S
ECONOMIC RESEARCH SERVICE**

July 1975 — September 1976

On January 1, 1978, three USDA agencies--the Economic Research Service, the Statistical Reporting Service, and the Farmer Cooperative Service--merged into a new organization, the Economics, Statistics, and Cooperatives Service.

PREFACE

This supplement lists publications on agricultural economics and related socioeconomic issues that were produced or sponsored by the Economic Research Service (ERS), during July 1975 through September 1976. It updates the seven supplements to ERS-368. Previous lists were published in ERS-343 and ERS-430 (formerly ERS-350 and ERS-Foreign 167). Additional publications are listed in ERS-205.

The listing is intended to include citations for all published material of more than temporary interest regardless of the form in which published or its current availability. Important among these are publications in Department and ERS series, periodic reports, articles in periodicals of the Department, and State experiment station bulletins which report results of State-Federal cooperative studies in agricultural economics. Articles in technical and professional journals, both within and outside the Department, are cited as well as proceedings of symposia and conferences which report important ERS research results. Publications are grouped by subject-matter areas and by ERS divisions responsible for research in such areas. Within each subject area, bibliographic entries are arranged alphabetically by author; entries without author are arranged alphabetically by title after the author listings. Articles by the same author are entered chronologically by date of publication.

Papers, speeches, articles in nontechnical journals, other news releases, and informational or extension items generally have been excluded as not being of continuing importance. A few such items were included if, at the time of release, they presented significant initial research results or findings not available elsewhere.

Citation of publications provides no assurance that copies are available. Generally, reference copies can be found in libraries. Publications from State experiment stations usually can be obtained from issuing stations. Some items produced by non-public agencies are available from the publishers. Many publications can be obtained from the Division of Information, Economics, Statistics, and Cooperatives Service, U.S. Department of Agriculture, Washington, D.C. 20250. Photoreproductions (photoprint or microfilm) of material in its collection may be purchased from the Photocopy Section, National Agricultural Library, U.S. Department of Agriculture, Beltsville, Md. 20705.
